# CONTAINER INTRODUCTION

## Common container size:

Fast LCL: 5950\*3000\*2800

Packing box: 5800\*2400\*2896

Corrugated board container: 5500\*2500\*2200

Folding box: open size 5800\*2440\*2620, close size 5800\*2440\*510

Expandable container: open size 5850\*6300\*2500, close size 5850\*2252\*2500

In addition to standard container sizes, our company can also provide custom container sizes

Note: Because the width of road transportation does not exceed 3m, and considering the firmness of the structure and the site

The hoisting is considered comprehensively, so the general maximum width of the container can be 3m.

# CONTAINER INTRODUCTION

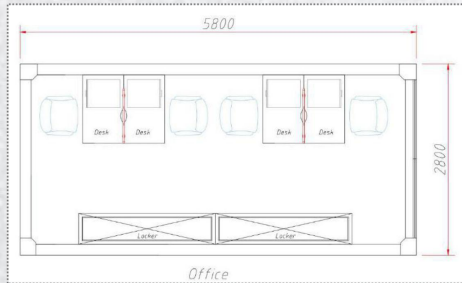

## Advantages Features

- Modular**  
Movable, modular units can be combined and moved at will
- Detachable**  
It can be assembled quickly, has a short manufacturing period, and can fully meet different functional requirements
- Variability**  
The configuration and layout are flexible and changeable, which can fully meet different functional layouts
- Aesthetics**  
Changeable shapes, changeable colors
- Stability**  
Steel structure, high safety
- Durability**  
Steel outer wall, corrosion resistance, acid resistance, no rust and no cracks
- Sound insulation**  
Air partition design, good sound and heat insulation
- low cost**  
Low cost, high quality and low price

# ORDINARY CONTAINER

### Ordinary container:

There are different styles of fast LCL, packing box, folding box, etc. The outer wall has flat and corrugated boards to choose from. The appearance is simple, cost-effective, and diverse in use.

# CONTAINER FOR HUOSE

**Residential container:**  
Containers have long surpassed the scope of transportation tools. They have been designed by environmentalists and creative people with great brains into a variety of ingenious living spaces, creating a new way of life and living for people.

# CONTAINER FOR HUOSE

There are many exterior wall styles of residential containers, which can be selected according to personal preferences. The installation of solar energy devices on the top truly achieves environmental protection and energy saving, and meets the requirements of contemporary green life.

Residential containers can be single or multiple combinations to meet different needs.

# CONTAINER FOR HUOSE

Container apartments can also be made into residential apartments and service apartments like ordinary buildings. In development zones, industrial zones and other places, building multi-storey apartment buildings can solve the problem of food and accommodation for labor-intensive factory employees. It is very practical and convenient. The site can be moved for reuse.

## CONTAINER FOR SHOP

This type of container convenience store can be used as a supporting facility for a petrol station, and can also be used in expressway service areas.

## CONTAINER FOR SHOP

### Container shops:

The advantage of using containers as shops is that they can be easily moved to various places suitable for business operations, and it is convenient for operators to place shops according to the flow of people. On the other hand, the eye-catching shape of container shops will be easier to attract customers' attention, which is suitable for gas stations, service areas, commercial streets and other places, and container shops are cheap and cost-effective.

## CONTAINER FOR KIOSK

The container newsstand is a non-standard product and can be customized. It is suitable for parks, streets, community centers and other places. It covers a small area, has a large space for use, and is easy to move. Container newsstands are highly practical. We can purchase newspapers, books, beverages, snacks and other common daily necessities through the container newsstands.

## CONTAINER CATERING SHOPS

In terms of shape and function, container catering shops have a variety of options. The entire surface of the glass will appear taller, and the hydraulic opening and closing system will extend the use space, and the staircase can effectively use the balcony space on the second floor. More choices, worth having.

The container restaurant on the second floor has a variety of styles. The first floor can be added with a canopy to maximize the space used and accommodate more customers.

# CONTAINER CATERING SHOPS

The first floor is a commercial space, the second floor is a residential space, and then there is an open-air large balcony. This assembled structure can meet the placement needs of different venues and can truly achieve multiple uses of a room.

# CONTAINER CATERING SHOPS

The advantages of installing rolling gates around are: when all rolling gates are open, the indoor air is very circulated, and the view is also very wide. When all rolling gates are closed, the safety of the entire building is greatly guaranteed.

## CONTAINER FOR OFFICE

The first floor is used as an office area, and the second floor is used as a leisure and entertainment area, allowing you to relax appropriately while working.

A studio is generally established by several people or one person. It is a creative work space. The scale does not need to be too large, but it must be exquisite and unique. Using a container as a **hair styling studio** is itself a creative space. Although the volume is small, the form of expression is extremely colorful.

## CONTAINER FOR TOILET

### Container toilet:

Small public toilets are indispensable facilities in urban blocks, factories, tourist attractions, farms, and project bases. Public toilets have relatively high requirements for the mobility of facilities. In addition, the functions of firmness, wind resistance, heat preservation and heat insulation cannot be ignored. Container construction can well meet the above needs.

# FOLDING CONTAINER/ EXPANDABLE CONTAINER HOUSE

Foldable Container House:

Expandable Container House:

**Feature:**

It is easy to assemble and can be moved frequently. The important thing is that it has a sufficiently large usable area and spacious living space. All accessories have been assembled in the factory. The house can be folded to save space during transportation. When transported to the destination, it can be installed quickly and easily on the ground.
